

SDG Goal 3 Good health and well-being

SDG Target 3.1 By 2030, reduce the global maternal mortality ratio to less than 70 per 100,000 live births

SDG Indicator 3.1.2 Proportion of births attended by skilled health personnel

1. Name of data series	
Live births in hospitals	
Compliant with SDG metadata: no	SDG Metadata

2. Definition of indicator
The indicator contains the live births in hospitals. These births are attended by skilled health personnel like doctors, nurses or midwives.
3. Comparison with SDG metadata (as of 11/07/2017)
<p>The indicator only reflects the SDG indicator 3.1.2 partly. Voluntarily reported data of home births do exist, but are not consistent with the data of the hospital statistics and the birth statistics of the Federal Statistical Office.</p> <p>Additionally, the age of the mother is not limited from 15 to under 50 years of age according to the metadata description. Births of younger and older mothers are usually more risky than others. These mothers need skilled attendants in particular. Hence, the time series presented as indicator is not age-limited.</p>

4. Data description	
The data on live births in hospitals are derived from the hospital statistics (mandatory census) and the data on registered live births from the birth statistics (administrative data). Both statistics were conducted by the Federal Statistical Office.	
5. Calculation method	
$\text{Live births in hospitals} = \frac{\text{Live births in hospitals (number)} \times 100 \%}{\text{Registered live births (number)}}$	
6. Unit of measure	%

7. Timeliness	8. Frequency
t + 9 months	Annual
9. Last regular revision	10. Revised period
Not applicable	Not applicable

11. Accessibility of source data
